## LW39-10 Subminiature Type Cam switches

LW39-10 are widely applicable to the places with quite small installation space. The single-hole installation method that is same to LW39 series pushbuttons is used with the installation hole size as 16 mm or 22 mm . The international popular built-in wiring method is applied, safety and reliable. The operation head is designed with the sealing component and its protection class is IP64.

- Ith is 10 A
- Operating angle: $30^{\circ}, 45^{\circ}, 90^{\circ}$
- The maximum number of contact poles: 8
- The gold-plated silver alloy contact is used, which has greatly guaranteed the contact reliability under low voltage and low current.

## Normal Type LW39-10

## LW39-63/16

The special series with main and auxiliary switches are applicable to the places that shall connect and disconnect the circuits in the power distribution circuits or mechanical and electrical control circuits, and deliver the signals to the control circuits. The main switches have applied the features of LW39-63 series cam switches and auxiliary switches have applied the features of LW39-16B series cam switches. They can be operated integrally with the same axle.
Ordered Model: LW39-63/16
Please provide the contact chart and confirm the model by our Service Department

## LW39 Series Cam switches

## Model definition

Please provide the specific model when the user order LW39 series cam switches. There are three ways to confirm the model:
(1) Select from the models of the ordinary cam switches (please reference to P21-26). Please show us if there is any further requirement;
(2) Please tell us the model according to the description of model;
(3) Fill the blank contactor diagram (p28) and we will help you confirm the model.

- LW39-63/16, Please provide the contactor diagram and we will help you to confirm the model.
- Description of illuminate color code and voltage code:
- "g" means green and "r" means red
- "23" means AC/DC24V, "26" means AC/DC110V, "28" means DC220V, and "31" means AC220V.

## Note:

1. The color code has sequence requirement when the cam switch has illuminate modular, with the panel face the front and write the color code from left to right.
2. For example: "-gr23", shows that the left is green light and the right is red light. "-rg" 23 " shows that the left is red light and the right is green light.
3. Wiring terminal of illuminate modular:
4. The defaulted wiring terminal is common negative poles: $\mathrm{X} 1(-), \mathrm{XO}(-), \mathrm{X} 2(+)$. Please show us if there is any special wiring requirement.

## Code of Position

The code of position indicates the gear features of the cam switches, including maintained type and spring-return type.
(1) Maintained type: it does not have spring return function. LW39 series cam switches have $30^{\circ}, 45^{\circ}, 60^{\circ}$ and $90^{\circ}$ position. Please attention the position of each models and fill the position codes when you ordered.

| Position | Applicable Model | Position circle | Example |
| :---: | :---: | :---: | :---: |
| $30^{\circ}$ | LW39-10, LW39-16, LW39-25, LW39-63 |  | "3KC" indicates $30^{\circ}$ position, starting from K and ending at C with clockwise. It has 5 positions K, O, A, B, C. |
| $45^{\circ}$ | LW39-10, LW39-16, <br> LW39-25, LW39-63 |  | "4OB" indicates $45^{\circ}$ position starting from O and ending at B with clockwise. It has 3 positions $\mathrm{O}, \mathrm{A}, \mathrm{B}$. |
| $60^{\circ}$ | LW39-16B, LW39-16C, LW39-63 |  | "6KE" indicates $60^{\circ}$ position, starting from $K$ and ending at $E$ clockwise. It has 4 positions - K, A, C. E |
| $90^{\circ}$ | LW39-10, LW39-16, LW39-25, LW39-63 |  | "9GC" indicates $90^{\circ}$ position, starting from $G$ and ending at $C$ with clockwise. It has 3 positions - G, A, C. |

Position Code Description:
 Ending position
Starting position
Starting position
" 3 " indicates $30^{\circ}$, " 4 " indicates $45^{\circ}$, " 6 " indicates $60^{\circ}$ and " 9 " indicates $90^{\circ}$
Note: if the switch is operated without limited in a circle, the ending and starting position will be the same letter, for example: "3JJ" indicates $30^{\circ}$ position, starting from $-90^{\circ}$ with 12 positions without limited.
(2) Spring return Type: one or more position for spring-return type have spring-return function. LW39 series cam switches have various spring-return function types for option.
The following table show the commonly used spring-return functions codes.
Please attention the application models.

| Spring-return Position code | Operation Position (Angle) | LW39-10 | LW39-16A | LW39-16B <br> LW39-16C | LW39-25 | LW39-163 |

Precautions: "*", means the number poles of the cam switch is less than 3;
if you have more requirement , please contact our technical department.

## Contactor Codes

The contactor codes can be showed in the model with the following two ways:

1. Inquiry the contactor codes in the 'contactor codes handbook';
2. We can provide you the contactor code according your contactor diagram (P28);

## For example:

Requirements: 3 position; the 1st position has 4 contactors closed, the 2 nd position has 2 contactors closed and the 3rd position has 4 contactors closed. The contactor codes can be got in the 'contactor codes handbook' as: 424/3.

| Junction Code | $424 / 3$ |  |  |
| :---: | :---: | :---: | :---: |
| Operation Gear | 1 | 2 | 3 |
| $1-2$ | $\times$ |  | $\times$ |
| $3-4$ | $\times$ |  | $\times$ |
| $5-6$ | $\times$ |  | $\times$ |
| $7-8$ | $\times$ |  | $\times$ |
| $9-10$ |  | $\times$ |  |
| $11-12$ |  | $\times$ |  |

If contactor codes can't be found in 'contactor codes handbook' ,you can provide the contactor diagrams to us (fill with "x" letter as the contactor closed on the blank contactor diagram on the P28), and add the "x" letter after the contactor code as the customer requirement.
contactor Code: 424X

| Junction Code | $424 \times / 3$ |  |  |
| :---: | :---: | :---: | :---: |
| Operation Gear | 1 | 2 | 3 |
| $1-2$ | $\times$ |  | $\times$ |
| $3-4$ | $\times$ |  |  |
| $5-6$ |  | $\times$ | $\times$ |
| $7-8$ | $\times$ |  | $\times$ |
| $9-10$ |  |  | $\times$ |
| $11-12$ | $\times$ | $\times$ |  |

Note: X in contactor diagram means that the contactor closed.

## Escutcheon Plates Code

The Escutcheon Plates Code of panel indicate the specific requirements for the prints on the panels of the cam switches. The user can select escutcheon plate code according to "Ordinary escutcheon Codes of Panel", or provide the requirements for customization. If there are no show in the Order Models, we will provide the panels according to the defaulted escutcheon plates code rule.

## 1. Defaulted Escutcheon Plates Code:

(1) If one position have no contactor closed, this position plate shall be " 0 " and then the position on both sides shall be show in sequence of Arabic figure as " 1 ", " 2 ", " 3 "...... For 3 position cam switche, there is not the plate as of $1-0-1$, instead of 1-0-2.
For example:

(2) If the position haven't " 0 ", each position will be showed in sequence of Arabic figure as " 1 ", " 2 ", " 3 ". .(clockwise).

For example:

## 2. Ordinary escutcheon plates:

Notes: the codes starting with A are applicable for LW39-10, LW39-16A, LW39-25 and LW39-63
The codes starting with B are applicable for LW39-16B and LW39-16C
Positioning Angle - $30^{\circ}$

Positioning Angle - $45^{\circ}$

Positioning Angle - $90^{\circ}$ and Combined Angles

Positioning Angle - $60^{\circ}$

3. Special Plate, add the letter "P" after the pole code.

## Model and Revision Specification

LW39 series cam switches have been very popular used by users in the market. With the continuously increased in these years, the product functions and models have been also updated so that the meanings of the models of the initially designed products cannot satisfy the ordering demands of the customers. Therefore, after the careful study, it has been decided that the meanings of the original product models shall be modified in this revision.

## The main modifications are as follows:

(1) The two codes "A, B" and "Function Representation" in the old models LW39A-16 and LW39B-16 are integrated into the "function model" in the new model.
(2)"Code of position", for easy memorization and to reduce the errors during the ordering, please use the new code applicable rules in the definition of a new model. (Reference to Code of Position in p16 for details)
(3) The contactor codes can be prepared by the user or us flexibly or follow the existing "contactor codes handbook'" for easy memorization and individualized compiling (reference to Code of Position in p17 for details)
Please try to order the products according to the new defining method of the models and we feel sorry for any inconvenience to you!
